OBJECTIVE

Highly skilled software/full-stack developer looking to utilize my experience in working with a variety of programming languages/frameworks and building full-stack web applications.

SKILLS & INTERESTS

Programming Languages:
JavaScript, Java, C++, Swift

Backend Technology:
Node.js

Technology:
Google's firebase

Libraries:
React JS

PROJECTS

WhatToWear

iOS Mobile App

[Personal Project]

Design and implement an IOS Application that provides the end-user with information based on the current weather. features include current weather, today's forecast, apparel suggestions based on the current weather and weather alerts. MVC Design Patterns.

- Used Swift 4 in Xcode 10 to create a user-friendly mobile application
- Dark Sky RESTful API for weather data. Json parsing
- Written methods that allow the user to change their gender and change temperature scale.

Trivia RUSH

Android Mobile App *[Group Project - Team of 4]*

Trivia RUSH is a Trivia App for Android available on the Play Store. The app was built as a Software Engineering class project. To learn the concepts of Software Engineering and Software Development life cycle.

- Developed a fun Android game using JAVA 8 in Android Studio as part of a class project for Software development to get a better understanding of the Software Development life cycle.
- Using Google's Firebase Authentication SDK and Database (Cloud Firestore Database) saved user data online.
- Also added SQLite Database which lets a user use the app offline and improve the execution time

JPMorgan Software Engineering Virtual Experience

- Establishing financial data feeds
- Data Visualization with Perspective
- Frontend web development
